

Safety~Kwik Ditch Magnet & Box

Land Model Unit

PSR Aluminum Shipping Box

Safety~Kwik DM Removal End

Safety~Kwik DM Hand Safety

Safety~Kwik DM Safety Cleaning

Safety~Kwik—Avoid Hand Injury

Safety~Kwik—Safety System End

Stab DM on End Piece & Slide Safe

magnets rent for 5-day minimum 600.00 after 5-days they rent 60.00 a day each

Safely Clean Metal into System Box

Aluminum Shipping & System Box

Inspect, Weigh, Measure, or Dispose

Make-Ready Cleaned Unit for Work

**“SAFETY~KWIK”
DITCH MAGNETS BENEFITS**

SAFETY: “Safety~Kwik” Ditch Magnets provide operators HES provision of the exclusive designed clean-sliding feature to wipe metal debris from the magnetic body of the magnet...safely avoiding potential and senseless hand injury. HELPS ACHIEVE ZERO INCIDENT TARGET!

Morgan City, LA Facility

Aluminum Shipping Box protects tool and becomes active part of tool system package to identify & capture metal fines, slivers, etc. for inspection, study or disposal.

WELL & FLUIDS CONTROL:

“SAFETY~KWIK” DITCH MAGNETS’ MAGNETIC POWER IS (10) TEN TIMES GREATER THAN THE MAGNETIC FORCE OF THE COMMON DITCH MAGNET ON THE MARKET & PRESENTLY PROVIDED TO OPERATORS. Absolutely, it has always been well known that ditch magnets are needed when a window is to be cut, milling is to be done, or during fishing jobs, but the “Safety~Kwik” Ditch Magnet is so much more powerful than any other magnet in the marketplace that it is now feasible...many would say even advisable or a better practice...to use “Safety~Kwik” Ditch Magnets at all times when casing is set during all drilling operations through completion. Safety~Kwik Ditch Magnets work great,

work fantastically, where other ditch magnets have never been able to compete...because the common ditch magnet presently offered simply doesn’t have the magnetic power to pull most metal particles from the mud or fluid. Ditch magnets currently provided have only (1 ½) one & one half pound pull. Imagine 10 Times Greater Power! It Works!

Promotes cleaner fluids, both mud and completion fluids, by maximizing removal of metal content; stabilizer wear, casing wear, pipe wear, foreign metal particles from unknown sources, iron oxides, etc., etc., etc.

Potentially saves damages to mud motors, down-hole motors, screens & shakers, bit jet plugging, etc...all of which can cause costly drilling/rig downtime, lesser penetration rate, or otherwise nuisances prohibiting drilling and completion operations **BEST and MONETARY** efficiency.

Allows *Fluids and Solids Control Vendors* tools to capably manage their business *better*.

Provides pro-active operators with opportunity to scientifically research metal origination; casing, pipe, other...to be alerted for future casing damage, pipe damages, or other problems that might develop, etc.

BEST VALUE!

Using (2) two or even (3) three “Safety~Kwik” Ditch Magnets from SPUD thru COMPLETION will not seriously damage an AFE, but utilization will be worth the saved damages that excess metal in fluids can cause equipment used while drilling and completing.
